

# PHYLUM HEMICHORDATA

// 06.01.17

## ANATOMY:

PHYLUM HEMICHORDATA  
CLASS ENTEROPNEUSTA  
SALPIGOLOSSUS PUSILLUS

NOTES: COLLECTED FROM NORTH LOVE IN SANDY SUBSTRATUM; ARE INFANAL.  
COLOR: BRIGHT ORANGE; GENITAL REGION OF TRUNK IS MORE PALE GREEN. BEHAVIOR / MOVEMENT: INCREDIBLY FRAGILE ORGANISMS - WHEN COLLECTED, MOST OF THEM BROKE FROM US LOOKING AT THEM, HENCE THE BUSTED TRUNK. AFTER COLLECTION, SUBMERGED THEMSELVES IN MUCUS, WHICH MADE THE SAND AROUND THEM EXCEPTIONALLY CHALLENGING TO CLEAN OFF. TRUNK REMAINED UNRLED EVEN WHEN THE PROBOSIS EXTENDED + RETRACTED.

C

Handwritten scribbles and faint markings, possibly including the number '20'.
